

A GLOBAL MISSION

MANASTEJ

Global Wealth Needs Global Health.

The world's first unified, AI-powered mental wellness operating system — turning reactive care into proactive, continuous infrastructure for individuals, clinicians, and enterprises everywhere.

Founded by Daliya Chakraborty · Investor Presentation 2026

“Where every mind matters.”

Why Daliya. Why Now.

“An outsider who saw what insiders missed — and built the system to fix it.”

The Outsider Advantage

An educator and systems thinker, not a clinician. No institutional blind spot — she saw the gap between reactive care and the proactive infrastructure organizations actually need.

She Taught Herself to Build

Architected Manastej's core systems herself across Python, Firebase and generative AI — the Cognitive Flow Tracker, billing engine, and role-based clinical access layer.

Discipline at Scale

A decorated national-level leader recognized for mission-driven rigor. The same structured, built-to-last discipline runs through every layer of the platform.

Built From Lived Insight

Five years leading inside education systems across multiple international curricula — she has been the user, and has worked inside the institutions she now serves.

The Human Cost, Hidden in Plain Sight

Rohan — 2:14 AM

Lead engineer, still at his desk

Not ambition — he's trapped. Low HRV, shallow breathing, neural fatigue. This isn't burnout. It's a critical slowing of the nervous system — a physiological state no productivity metric will ever capture. The collapse is happening in real time, invisible to every tool his company owns.

Meera — The Blindspot

HR Director, watching lagging data

She sees: falling velocity, rising attrition, declining engagement.

She cannot see: real-time cognitive load, HRV decline, who is on the edge — before they resign.

Her response: a mandatory virtual escape room. Well-intentioned. Catastrophically mismatched.

The resignation isn't written yet — but the decision is made. **Organizations cannot see cognitive breakdown in real time. That is what Manastej exists to solve — not after the breakdown. Before.**

The Reactive Healthcare Trap

Silent Epidemic

Employees hit severe burnout and physiological distress with no early-warning system in place — anywhere.

Zero Visibility

Organizations have no real-time insight into cognitive or emotional states. All data is retrospective — surfacing only after the damage is done.

EAP Failure

Legacy Employee Assistance Programs suffer from chronically low utilization, response delays, and deep distrust over privacy.

The system was built to react. **Manastej is built to prevent.**

THE PROBLEM

A Trillion-Dollar Global Crisis

1B+

People living with a mental health condition worldwide

\$1T

Lost to depression & anxiety every year in productivity

12B

Working days lost globally each year

\$16T

Projected cumulative economic cost by 2030

This is not a wellness problem. It is a structural market failure — and one of the largest underserved opportunities in global healthcare.

The Majority of Cases Go Untreated

Social Stigma

Fear of judgment keeps people from ever seeking help.

High Cost

Therapy stays out of reach for most households worldwide.

Lack of Access

A global shortage of mental-health professionals means too many wait too long.

Globally, fewer than 2% of health budgets are spent on mental health; the treatment gap exceeds 75% across many low- and middle-income countries (WHO).

The Digital Health Goldmine

Global digital mental health market, USD billion

~19%

CAGR — among the fastest-growing health segments

AI

The fastest-growing slice within digital mental health

\$17.5B

Mental-health apps alone by 2030

Sources: Research and Markets; Grand View Research; MarketsandMarkets (2025–32).

The Platform: Scalable Cognitive Infrastructure

Developmental Baseline

Maps deep psychological identity — attachment style and innate temperament. Not sterile questionnaires.

Cortex Neural Stack

A brain-inspired engine: thalamus fuses inputs, limbic scores dysregulation, prefrontal gates intervention.

TLI & Symmetry Mapping

The Tension Load Index mathematically links musculoskeletal tension to burnout risk.

Mental Weather Forecast

Flags potential depressive episodes up to 14 days ahead by detecting delays in stress recovery.

Bio-Nudges via rPPG

Reads facial skin-color micro-shifts via camera to estimate HRV and trigger Micro-Reset overlays.

The 90–10 Principle: AI at Scale

■ AI triage & peer support ■ Licensed clinicians

Infinite Scalability

The AI layer absorbs daily burnout, stress, and peer support with zero clinician bottleneck.

Clinical Precision

Licensed professionals are reserved exclusively for high-risk, critical-intervention cases.

Zero Hardware

No wearables, no devices — the platform runs on the smartphone already in every pocket.

From Data to Deep Care

OUR OFFERINGS

Care That Meets You Where You Are

MindAlly

24/7 Peer Support

A vetted network of peers, crisis first-aiders, and professionals with live-status tracking. Instant, anonymous, and protected by active PII-leakage safeguards.

CareConnect

Licensed Therapists

A global network of licensed clinicians, powered by predictive diagnostic drafts that free therapists from admin so they focus on healing.

Arogya Hub

Clinical Commerce

A psychology-first marketplace of clinician-prescribed somatic tools — with a 'Pause for Peace' guard that blocks stressed impulse-buying.

Command Center

Enterprise (B2B)

Bi-daily workforce schema, contagion mapping, and Causal Discovery — giving HR the data they need while protecting privacy absolutely.

FOR ORGANIZATIONS

Corporate Command Center

Bi-Daily Workforce Schema

Morning baseline vs. evening check-out replaces the annual survey.

ONA & Contagion Mapping

Graph Neural Networks map how stress spreads across the org hierarchy.

Causal Discovery (CD-RCA)

Explainable AI shows why a team is stressed — workload, role ambiguity, leadership.

Anonymity Guardrails

HR is physically blocked from viewing any team smaller than five people.

14 Days

Crisis prediction window

2×

Daily mood capture

5+

Privacy floor (team size)

0

Hardware required

AI That Acts — Not Just Dashboards

When a team's Burnout Risk Index breaches a clinical threshold, Manastej orchestrates automated interventions — shifting from reactive damage control to proactive cultural resilience.

Communication Throttling

Automatically mutes non-essential Slack and Teams notifications for at-risk groups before the noise compounds fatigue.

Cognitive Firewalls

Enforces protected calendar focus blocks to break the cycles of panic-working that quietly erode recovery.

Dynamic Rest Windows

Recommends mandatory 'Pause' days for specific teams before systemic fatigue turns into turnover.

The Cortex Engine: Causal Discovery, Not a Chatbot

The Cortex Neural Stack

Sensory Thalamus

Fuses multi-modal inputs — voice, facial, behavioral

Limbic Engine

Calculates the emotional dysregulation score

Prefrontal Executive

Ethical gatekeeper — decides the intervention type

Causal Discovery (CD-RCA)

Identifies why a department is stressed, not just that it is

rPPG Biometrics

HRV, stress markers and cognitive load via the front camera.
No wearables, zero friction.

Zero-Knowledge Privacy

Mathematical anonymity at the protocol level — not just a privacy policy.

Graph Neural Networks

Maps stress contagion across org networks; flags risk clusters before attrition.

Three proprietary innovations. No competitor currently holds all three at once.

Why Legacy Models Fail

Capability	Teletherapy (BetterHelp, Talkspace)	AI Chatbots (Wysa, Woebot)	Enterprise EAPs (Spring, Lyra, Modern)	MANASTEJ
Infinite scalability	Capped by clinician supply	Partial	Clinician-dependent	✓ 90–10 AI model
Hardware-free biometrics	None	None	None	✓ rPPG via camera
Org contagion mapping	None	None	None	✓ Graph Neural Nets
Mathematical privacy	Policy only	Policy only	Policy only	✓ Zero-Knowledge Proof

Manastej is the only platform combining rPPG biometrics, ZKP privacy and GNN contagion mapping — hardware-free and infinitely scalable.

High-Margin B2B2C Architecture

Three revenue streams

B2B SaaS — Land & Expand

Tiered per-employee pricing localized by market. Low entry barrier, high expansion potential.

B2C Marketplace — Wallet / Session

Pre-loaded wallet (emerging) and per-session (developed) billing. ~30% platform take-rate.

Arogya Hub — Protocol Bundles

AI-triggered wellness bundles. ~3.75× higher order value, ~25% commission, zero inventory.

Unit Economics That Compound

Software margins, recurring revenue, and a land-and-expand motion — every customer gets cheaper to serve and more valuable over time.

5 : 1

LTV : CAC

Improving to 7:1+ at scale

~9 mo

CAC payback

Enterprise deals recoup inside a year

120%

Net revenue retention

Seats expand, tiers upsell

88.7%

Gross margin at scale

No hardware, no inventory

\$60

ARPU / employee / yr

Blended PEPM, room to grow

88%

Gross logo retention

Embedded in the HR workflow

Every \$1 of CAC returns \$5+, and ~89¢ of every new revenue dollar is gross profit. A model built to print cash as it scales.

A Clear Path to Profit

Capital-efficient by design: break-even in Year 2 and a ~27% EBITDA margin by Year 3 — on under \$750K of total funding.

Break-even

Reached in Year 2

\$13.5M

Revenue by Year 3

~27%

EBITDA margin in Year 3

WHAT DRIVES THE CURVE

- Land-and-expand seat growth
- Mix shift to the \$12 Cognitive Command tier
- Marketplace order-value uplift (~3.75x)

Illustrative model; bottom-up assumptions (seats, pricing, retention) available in the data room.

The ROI of Proactive Resilience

Mental health is no longer a soft metric — it is a hard operational cost. Manastej turns wellness from a sunk cost into a measurable driver of profitability.

The Cost of Inaction

Turnover: replacing a specialized employee costs 1.5–2× their annual salary.

Presenteeism: employees in a brain-fog state cost companies billions in lost daily output.

Wasted spend: EAP utilization historically sits below 5%.

The Manastej Return

Predictive retention: intervene weeks before an exit interview is ever scheduled.

Restored velocity: real-time nudges guide employees back to clear, high-performance states.

\$4–5 returned for every \$1 invested in treating depression and anxiety (WHO).

Source: WHO / World Economic Forum return-on-investment estimates for scaled treatment of depression and anxiety.

A Compliance & Interoperability Moat

Privacy by Architecture

Zero-Knowledge Proof anonymity built for GDPR and the EU AI Act — a structural advantage under the world's strictest regimes.

Enterprise-Grade Standards

Architected toward HIPAA, SOC 2 and ISO 27001 — meeting the bar enterprise legal and IT security teams demand.

Health Interoperability

HL7 FHIR-ready to plug into national and private health registries, establishing immediate clinical credibility.

Global From Day One

Multi-region data fencing and localized pricing let one platform serve regulated markets across the US, EU, and APAC.

Compliance is the moat: it shortens enterprise sales cycles and creates credibility competitors can't shortcut.

Bypassing Legacy Sales Cycles

1

Market Entry

90-Day Resilience Audits for high-burnout, high-willingness-to-pay sectors — tech and financial services across the US, EU, and English-language hubs like Singapore and the UAE.

Short sales cycle. High perceived value. Immediate ROI visibility — builds case studies fast.

2

Credibility Moat

SOC 2 + GDPR readiness and FHIR interoperability position
Manastej as a trusted health-infrastructure partner — a regulatory advantage competitors cannot replicate quickly.

Fast-moving startups become proof points. Compliance unlocks enterprise and public-sector scale.

From beachhead to global infrastructure — land where pain and budget are highest, then expand on a moat of trust.

The Gaps — And How We've Closed Them

We pressure-tested the questions every investor asks — and engineered the answer into the plan, not the appendix.

The Concern	How We've Closed It
Pre-revenue, no traction yet	Stage-gated raise: Stage 2 unlocks only after a paid pilot. The 90-day Resilience Audit turns pipeline into proof fast.
Regulatory exposure (biometrics, prediction)	Positioned as wellness decision-support, not diagnosis — with human-in-the-loop gating, GDPR / EU-AI-Act-by-architecture, and legal counsel budgeted.
Clinical efficacy unproven	A validation study is built into the first pilot; a clinical advisory board and explainable, auditable models establish credibility.
Will employees trust camera biometrics?	Strictly opt-in, Zero-Knowledge anonymity, a 5-person reporting floor, and no raw biometrics stored — consumer-grade UX drives daily use.
Well-funded incumbents (Lyra, Spring)	A predictive + agentic layer they can't retrofit onto teletherapy, plus a compliance moat — with white-label partnership optionality.
Solo, first-time founder	A self-built platform already proves execution; Stage 2 funds a clinical lead and an enterprise-sales hire, backed by an advisory board.

Every objection has an owner, a budget line, and a milestone — that is how a pre-seed becomes fundable.

THE ASK

\$250K to Build. Prove. Then Scale.

Stage 1 — Build (Months 1–6): \$250K

Stage 2 — Operate & Scale: \$480K

\$250K

Stage 1 — build & first paid pilot

< \$750K

Total capital to profitability

\$13.5M

Revenue by Year 3

Exceptional capital efficiency — you're not funding a company, you're funding a proof, then compounding into a category growing ~19% a year. Stage 2 follows the data.

GLOBAL WEALTH NEEDS GLOBAL HEALTH

Where Every Mind Matters

“When no one listens, we do.”

The Problem

\$1T lost every year. A 70%+ global treatment gap. Zero real-time corporate visibility.

The Technology

Cortex Engine: rPPG biometrics, ZKP privacy, GNN contagion mapping, 14-day prediction.

The Model

B2B2C SaaS + marketplace + peer & clinician networks. High-margin, hardware-free.

The Moment

~19% CAGR, regulatory tailwinds, and a workforce that finally has a platform built for it.

Manastej · Founded by Daliya Chakraborty · Raising \$250K Seed (Stage 1) · hello@manastej.com
